MANAGER OPERATIONS GUIDE

Hilton Euphoria Hotel Admin & Booking System Manual

A practical operating manual for managers and authorized staff who need to manage website content, guest bookings, room availability, inquiries, admin users and hotel settings from the new system.

System URL<https://euphoria-hotel.vercel.app>**Audience**Hotel manager, front desk lead,
admin users**Version**

Prepared 26 May 2026

Use this guide during handover, staff training and daily hotel operations.

STAY DATES

Tue, May 26 → Thu, May 28

CONTENTS

How To Use This Manual

This document is screenshot-led. Each section explains the purpose of the screen, the manager's decision points, what each action changes, and what to check before saving or confirming anything.

- | | |
|---|--|
| 1. System overview and access | 7. Room management |
| 2. Guest website journey | 8. Inquiries and follow-up workflow |
| 3. Bookings, reservations and checkout | 9. Admin users and permissions |
| 4. Admin login and dashboard overview | 10. Hotel settings and password management |
| 5. Booking management and booking detail drawer | 11. Website CMS content editing |
| 6. Calendar and availability controls | 12. Troubleshooting playbook |
| | 13. Daily, weekly and monthly checklist |

Privacy note: screenshots use operational screens and a clearly labeled sample booking where booking details are needed. Do not share exported admin screenshots publicly unless guest names, emails, phone numbers and booking references have been removed.

What The Platform Controls

The system has three manager-facing areas: the public website, the booking/admin dashboard, and the CMS content dashboard. The booking dashboard controls hotel operations; the CMS controls editable website content.

Homepage And Main Navigation

The homepage is the first customer-facing screen. Managers should check that contact details, room links, facility sections and major call-to-action buttons are correct.

Public homepage on the deployed website.

- 1 Use the main navigation to confirm public pages are reachable.
- 2 Room and booking buttons should take guests into the booking journey.
- 3 Hero images and homepage text are edited from the CMS, not from the booking admin.
- 4 Footer contact details and social links should match hotel-approved information.

ROOMS

Rooms Listing And Room Detail Pages

The rooms section is where guests compare rooms before booking. Pricing, capacity and active/inactive room status come from the room records used by the booking engine.

Rooms listing page.

Room detail page for a selected room.

Manager checks

- Room names, prices and descriptions should match the hotel's approved tariff.
- Inactive rooms should not be treated as bookable.
- Room images should represent the exact room category where possible.
- Guests should be able to move from room detail to reservation without errors.

Reservation Form, Payment Preview And Guest Self-Service

The booking journey collects guest details, verifies room/date availability, creates the booking record and moves the guest into checkout or reservation confirmation.

The screenshot shows a hotel website's reservation form. The header includes a logo and navigation links: HOME, ROOMS, ABOUT US, CONFERENCE ROOM, HOTEL MENU, CONTACT US, MY BOOKING, and a RESERVE button. Below the header, a breadcrumb trail reads: ← BACK TO ROOM — RESERVE — PAY AT CHECK-IN. The main heading is "Hold your room." followed by the text: "Reserve Deluxe now with no payment required. The full amount is due upon arrival at the front desk." The form is divided into two columns. The left column, titled "Your details", contains fields for "First name*" (Adaeze), "Last name*" (Okafor), "Email address*" (you@example.com), and "Phone number*" (+234 800 000 0000). Below these is a "Guests" section with "Adults" (1 adult) and "Children" (No children) dropdowns. The right column features a "YOUR ROOM" section with a "Deluxe" room image and a "Reserve" button. Below the room image, the dates "Wednesday, 10 June 2026 → Friday, 12 June 2026" and "2 nights" are displayed.

YOUR ROOM

Deluxe

Wednesday, 10 June 2026 → Friday, 12 June 2026
2 nights

Guest reservation form with selected room and dates.

- 1 Check-in and check-out dates must be valid and available.
- 2 Guest contact details are used for confirmation and follow-up.
- 3 Special notes should be reviewed by the front desk before arrival.
- 4 After submission, the booking appears in the admin dashboard.

The screenshot shows a payment preview page. The header is identical to the reservation form. The main heading is "Complete your payment." followed by the text: "This secure payment step is ready for Paystack activation once live gateway credentials are connected. No card is charged while payment preview mode is active." The form is divided into two columns. The left column, titled "PAYMENT PREVIEW", contains a "MERCHANT" section for "Hilton Euphoria Hotel" and a "CARD NUMBER" section for "4084 0840 8400 4081". Below these are fields for "CVV" (123) and "PIN / OTP" (Preview verified). A "COMPLETE PREVIEW PAYMENT" button is at the bottom. The right column, titled "BOOKING SUMMARY", shows the room "Deluxe" for "Wednesday, 10 June 2026 to Friday, 12 June 2026". It lists the reference "EUP-2026-TPQHY", guest "Manual Sample", 2 nights, subtotal "N100,000", VAT "N7,500", and a total of "N107,500". A green circular icon with a white 'D' is in the bottom right corner.

Complete your payment.

This secure payment step is ready for Paystack activation once live gateway credentials are connected. No card is charged while payment preview mode is active.

The screenshot shows a guest self-service booking lookup page. The header is identical to the reservation form. The main heading is "Manage your booking." followed by the text: "Enter your booking reference and email address to view your reservation details, check status, or request a cancellation." The form is divided into two columns. The left column, titled "GUEST SERVICES", contains a "Booking reference" field with a placeholder "e.g. HEH-2026-AB12CD" and a note "Your reference is in your confirmation email (format: HEH-YYYY-XXXXXX)". Below this is an "Email address" field with a note "The email used when booking". A "FIND MY BOOKING" button is at the bottom. The right column, titled "Can't find your booking?", contains a note "Call our front desk at +234 800 000 0000 or email."

Manage your booking.

Enter your booking reference and email address to view your reservation details, check status, or request a cancellation.

Can't find your booking?

Call our front desk at +234 800 000 0000 or email.

Guest self-service booking lookup page.

BOOKING CONFIRMATION

Success Page And Guest Outcome

Once a booking is confirmed, the success page gives the guest a reference number and summary. Managers should use the booking reference to locate the booking quickly in the admin dashboard.

Booking success page for the training sample booking.

Important: until the live Paystack keys are connected, the payment step is a preview. When Paystack is active, managers should confirm payment status and reference from the booking detail drawer.

Admin Login

Only authorized users should access the admin or CMS areas. After handover, the hotel should immediately update the manager password and keep credentials private.

The screenshot displays the 'Admin sign in' interface for the Hilton Euphoria Hotel. On the left, a sidebar titled 'Hotel operations' lists various management tools: Dashboard, Bookings, Calendar, Block Dates, Rooms, Inquiries, Users, and Settings. Below this is the 'Operations center' section, which provides 'Live booking tools and hotel management controls.' The main content area features a central sign-in card. At the top of the card is the hotel's logo and name, 'HILTON EUPHORIA HOTEL'. The card is titled 'Admin sign in' and includes the instruction 'Access the hotel management workspace.' Below this, there are two input fields: 'EMAIL ADDRESS' with the placeholder 'you@hotel.com' and 'PASSWORD' with masked characters. A 'SIGN IN' button is positioned below the password field, and a 'Forgot password?' link is located at the bottom of the card. The top of the interface includes a 'BOOKING APP' header, a search bar for rooms, bookings, and guests, and a 'Bookings' button.

Admin sign-in screen with the hotel logo.

Password rule: use at least 12 characters with uppercase, lowercase, a number and a symbol. Do not reuse a personal password.

Today's schedule

Full calendar

No arrivals in the next 7 days.

Booking/admin dashboard overview.

- 1

Use the search bar to find a booking by guest name or booking reference.
- 2

Quick actions link to common front desk workflows.
- 3

Recent bookings should be reviewed daily for payment and arrival readiness.
- 4

The right panel highlights calendar and task summary information.

Booking List And Filters

The bookings page is the operational list for guest reservations. Use it to search, filter by status, export CSV, and open booking details.

Bookings table with the training sample booking.

- 1 Search supports guest names and booking references.
- 2 Status filters help managers focus on pending, confirmed, checked-in or cancelled records.
- 3 Click a booking row to open the booking detail drawer.
- 4 Use Export CSV for offline reconciliation and reporting.

Booking Detail Drawer

The detail drawer shows the operational truth for a booking: guest contact, room, dates, status, payment information, notes and available admin actions.

Booking detail drawer opened from the bookings table.

Status meaning

STATUS	MEANING	MANAGER ACTION
Pending	Booking was created but payment/confirmation is not complete.	Follow up or allow expiry based on policy.
Confirmed	Room should be treated as unavailable for those dates.	Prepare arrival and check guest notes.
Checked in	Guest has arrived.	Use for occupancy and front desk tracking.
Checked out	Stay has ended.	Use for reporting and reconciliation.
Cancelled	Booking is no longer active.	Confirm cancellation policy and notes.

Calendar And Availability

The calendar helps managers understand occupancy by date and room. It should be checked before accepting offline bookings or group reservations.

Closing Dates For Maintenance Or Offline Use

Use block dates when a room should not be sold online even though it exists in the room catalogue. Examples include maintenance, internal reservation, private hold or room inspection.

Block dates page.

- 1 Select the affected room.
- 2 Select from and to dates.
- 3 Add a clear reason so future staff understand why the room is closed.
- 4 Remove the block when the room becomes available again.

Room Management

The rooms page controls room records used by the website and booking engine. Edit room details carefully because public prices and availability depend on this data.

The screenshot displays the 'Rooms' management interface within a 'BOOKING APP'. On the left, a sidebar titled 'Hotel operations' contains a list of navigation items: Dashboard, Bookings, Calendar, Block Dates, Rooms (highlighted), Inquiries, Users, and Settings. Below this list is an 'Operations center' section with the text 'Live booking tools and hotel management controls.' The main content area is titled 'HOTEL DASHBOARD' and 'Rooms', with a subtitle 'Manage room details, pricing, imagery, capacity, and public availability.' A search bar at the top of the main area is labeled 'Search rooms, bookings, guests...'. The background of the main area features a large, abstract, colorful map of Mexico.

Room management page.

Operational caution: changing a room price affects new bookings going forward. Existing bookings retain their stored pricing unless manually adjusted in the database.

INQUIRIES

Contact And Conference Follow-Up

Inquiries are messages from contact and conference forms. A manager should review unread inquiries daily and assign follow-up where necessary.

Inquiries inbox.

Recommended process

1. Open each unread inquiry.
2. Confirm whether it is general contact, reservation help or conference/event related.
3. Call or email the guest using the provided contact details.
4. Mark as read once the inquiry has been handled.

Admin Users And Roles

Admin users determine who can access the hotel operations dashboard. Keep the user list small and deactivate old staff accounts immediately.

Manager rule

Use the CMS when a public page needs updated wording, a new hero image, corrected contact information or improved SEO text. Use the booking admin when rooms, bookings, availability or staff access need to change.

Editing A Public Page

Each CMS page editor contains page hero fields, page content fields and SEO fields. Contact page also includes footer and social settings.

Contact page CMS editor.

- 1

Save Draft stores edits without making them final.
- 2

Publish applies the approved content to the live website.
- 3

Preview opens the public page for review.
- 4

Media fields use approved hotel image paths from the media library.

Manager Playbook

Use this table when common operational issues occur.

SCENARIO	WHAT TO CHECK FIRST	LIKELY ACTION
Guest says they booked but staff cannot find it.	Search by booking reference, email and guest name. Check pending, confirmed and cancelled filters.	If no record exists, ask guest for payment/reference proof and contact technical support.
Guest says they paid but status is not confirmed.	Open booking detail and check payment reference/status.	Until live Paystack is connected, treat payment preview records according to hotel policy.
Room should not be bookable.	Check whether the room is active and whether a block exists for the dates.	Add a block date or deactivate the room if it should be closed broadly.
Room price looks wrong.	Check the Rooms page and confirm the stored price per night.	Edit the room price for future bookings and document the change.
Admin cannot log in.	Confirm email, password and active user status.	Use password reset or have a super admin update access.
Contact form inquiry needs follow-up.	Open Inquiries and read the latest unread messages.	Reply by phone/email and mark as read after handling.
Website text or image is outdated.	Open CMS, select the related public page and review fields.	Edit, preview and publish after approval.

Daily, Weekly And Monthly Checklist

This checklist helps the manager keep the system accurate and reliable.

Daily

- Review new and pending bookings.
- Check today's arrivals and departures.
- Review unread inquiries.
- Confirm blocked dates for unavailable rooms.

Weekly

- Review room prices and active room status.
- Export bookings for reconciliation.
- Review admin users and disable old accounts.
- Check public pages for outdated information.

Monthly

- Review revenue and booking reports.
- Update seasonal room rates if required.
- Audit password and user access.
- Confirm SEO titles and descriptions remain accurate.

Final handoff reminder: after delivery, the hotel manager should change the admin password, confirm Paystack credentials, confirm email sending credentials, and verify that the custom domain points to the final production deployment.
